Supporting Information

Figures s1 and s2 plot, respectively, SANS data of the high concentration samples normalized to the polymer concentration and the Holtzer plot of the same data for intermediate concentrations.

**Figure s1.** SANS data of PF8 in toluene-$d_8$ with concentrations 5 mg/mL (blue triangles), 10 mg/mL (black squares), 30 mg/mL (green diamonds), and 70 mg/mL (red circles) normalized to the polymer concentration. Dotted lines show the best linear fits to the 10 mg/mL case for comparison.

**Figure s2.** Holtzer presentation of the data shown in Fig. s1.
